ColorPRINT Professional RIP Software

ColorPRINT professional RIP software offers fast RIP speed, reliable & efficient job printing production, and streamlined workflow. Users can easily obtain smooth gradient, vivid images and sharp small size text. ICC color management workflow ensures vivid and brilliant colors. Available in ColorPRINT PS and ColorPRINT Server to satisfy the demands of medium-scaled and large-scaled users respectively.

Printer Control Software (PCS) offers a user-friendly interface to interactively control the printer, monitor printer status, and set printer options, such as the amplitude and pulse width of jetting waveforms and the temperature for each print head. PCS processes incoming RIP data and provides a software interface allowing RIP software to print jobs to the printer directly. The control interface features include print head cleaning, print head calibration, motor speed settings, and print head settings, etc..
